Complete Security Awareness Campaign package

1. Campaign Overview

Executive Summary

This campaign aims to raise awareness about malicious and unintentional insider threats within the organization. The campaign will educate employees on identifying, reporting, and mitigating insider threat risks by leveraging engaging materials, psychological influence principles, and behavioral design. It directly supports the organization's security objective of protecting patient data, safeguarding intellectual property, and maintaining compliance with HIPAA and other regulations.
The campaign will run for one month, with recurring microlearning and reinforcement activities to drive long-term behavior change.

Justification for Theme Selection

- Relevance: Insider threats remain one of the most significant risks in healthcare, with 58% of incidents involving human factors.
- Organizational Fit: Aligns with existing security priorities to strengthen internal security posture and reduce negligent insider errors.
- Behavioral Focus: Builds on the Fogg Behavior Model by combining motivation (real-world stories), ability (practical steps), and prompts (reminders and alerts).
- Psychological Principles: Utilizes Cialdini's Social Proof (peer participation), Authority (CISO messaging), and Commitment (pledges and quizzes).

Connections to Organizational Security Goals

Organizational Goal	Campaign Contribution
Protect PHI and sensitive data	Training on secure data handling and reporting
Reduce security incidents by 20%	Behavioral reinforcement through gamified learning
Meet HIPAA compliance requirements	Document participation, and audit trails
Foster a security-first culture	Visual reminders, leadership messaging, and incentives.

2. Awareness Artifacts

Artifact 1: Poster – "Spot the Insider Threat"

- Content: A visually engaging poster with a headline: "It's Not Always the Stranger. Watch for Insider Clues!"

- Elements:

    - Red flags checklist (e.g., unusual file access, policy violations).
    - QR code linking to a microlearning module.
    - Organizational branding and contact info for reporting suspicious behavior.

Artifact 2: Email Template (Launch Email)

Subject: "Insider Threat Awareness Month: Be the First Line of Defense"

Body:

This September, we're focusing on preventing insider threats.
Learn to recognize warning signs, protect sensitive information, and keep our organization safe.
Quick Action: Take our 5-minute microlearning module now.
[Start Training]
Together, we can stop insider threats before they start.
Psychological Principle: Commitment – Employees are asked to take immediate Action by completing a short task.

Artifact 3: Infographic – "5 Real Insider Threat Scenarios"

- Content:
    1. Negligent intern sends PHI to personal email.
    2. Disgruntled employee sabotages a system.
    3. Careless contractor loses a company laptop.
    4. Socially engineered finance clerk approves fake invoice.
    5. Unreported suspicious behavior leads to a breach.

- Call to Action: "Report anything unusual. You are the defense."
- Visual Style: Simple icons, minimal text, strong branding.

Artifact 4: Interactive Activity – "Insider Threat Escape Room" (Gamified Module)

- Format: Online, 10-minute activity where employees identify suspicious behaviors to "escape" a data breach scenario.
- Purpose: Builds engagement, reinforces learning through active participation.
- Integration: LMS-compatible and tracked for completion.

3. Implementation Plan

Week	Activity	Channel	Owner
Week 1	Campaign launch email and posters	Email, Print	Security Team
Week 2	Infographic distribution and microlearning module	Intranet, LMS	Training Dept
Week 3	Interactive escape room challenge	LMS, Email reminder	Security Team
Week 4	Wrap-up webinar and reward announcement	Zoom, Email	CISO
Ongoing	Monthly reinforcement tip via newsletter	Emai	Security Team.

Resource Requirements

- Budget: $5,000 (design, LMS integration, prizes for gamified module winners)
- Personnel: Security team (3), Training team (2), IT support (1)
- Technology: LMS, email platform, design tools

Communication Channels

- Email
- Intranet
- Digital signage
- Security newsletter
- Webinars

Stakeholder Engagement

- CISO endorsement email and webinar
- Department heads are reinforcing messaging in team meetings
- Monthly security champions recognition

4. Measurement Strategy

Metric	Target	Collection Method
Microlearning completion rate	90% participation	LMS tracking
Escape room participation	75% participation	LMS tracking
Phishing test reporting rate	15% improvement vs. baseline	Phishing simulation tool
Survey feedback	85% "useful/engaging" rating	post-campaign survey
Incident reports	10% increase in proactive reports	Security ticketing system

Reporting Plan

- Monthly Report: Progress against metrics shared with executives.
- Quarterly Review: Campaign impact on security culture presented to leadership.
- End-of-Campaign Summary: Full metrics with recommendations for next steps.

5. Sustainability Plan

- Monthly Microlearning Topics: Short, 5-minute modules to reinforce concepts.
- Quarterly Challenges: Gamified quizzes or scenario-based simulations.
- Security Newsletter: Regular tips and success stories.
- Recognition Program: Highlight employees who report incidents or complete training.
- Annual Refresh: Update materials with new case studies and emerging threat trends.

Peer Feedback Incorporated

- After receiving a peer suggestion for better engagement, I added an interactive escape room.
- Included is the stakeholder engagement strategy as recommended by feedback.
- Added specific metrics (completion rate, phishing test reporting) instead of generic "awareness increase."
- Refined budget and resource section for realistic implementation.
- Enhanced visual artifacts with actionable CTAs based on peer critique.

Spot the INSIDER THREAT

It's not always the stranger.
Watch for insider clues!

- Unusual requests or accessing large amounts of data
- Violation of IT security policies
- Drastic changes in behavior or attitude
- Unauthorized removal of company equipment
